

Introduction to Programming

Class 3, 5 September 2016

Jack Phillips <jack_phillips@asl.org>

Goals

Goal 1: You will understand what an algorithm is. (BIG GOAL!)

Goal 2: You will know how to approach a programming task with others and on your own.

Vocabulary

Algorithm

Escape character

Code

```
alert(string)
prompt(string)
var
// Comment
string.length
\"
\n
```

Line-up/Pair-up: Movie Titles

- **Think of a favorite movie.**
- **Line up according to the number of characters (i.e., letters, whitespace, and punctuation) in the title.**
- **Pair up**

Goal 1: You will understand what an algorithm is. (BIG GOAL!)

ALGORITHM

A series of finite steps that will solve a problem.

Introduction to Programming
Class 3, 5 September 2016

Goal 1: You will understand what an algorithm is. (BIG GOAL!)

Task: Make pancakes.

Goal 1: You will understand what an algorithm is. (BIG GOAL!)

Method

1. Sift the flour, baking powder, salt and caster sugar into a large bowl. In a separate bowl or jug, lightly whisk together the milk and egg, then whisk in the melted butter.
2. Pour the milk mixture into the flour mixture and, using a fork, beat until you have a smooth batter. Any lumps will soon disappear with a little mixing. Let the batter stand for a few minutes.
3. Heat a non-stick frying pan over a medium heat and add a knob of butter. When it's melted, add a ladle of batter (or two if your frying pan is big enough to cook two pancakes at the same time). It will seem very thick but this is how it should be. Wait until the top of the pancake begins to bubble, then turn it over and cook until both sides are golden brown and the pancake has risen to about 1cm (½in) thick.
4. Repeat until all the batter is used up. You can keep the pancakes warm in a low oven, but they taste best fresh out the pan.
5. Serve with lashings of real maple syrup and extra butter if you like.

Goal 1: You will understand what an algorithm is. (BIG GOAL!)

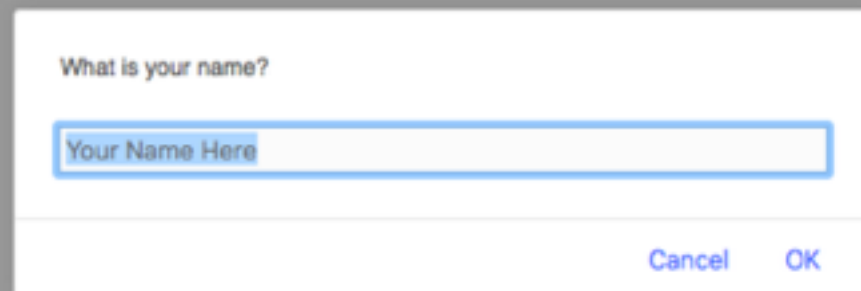

Flowchart

Goal 2: You will know how to approach a programming task with others and on your own.

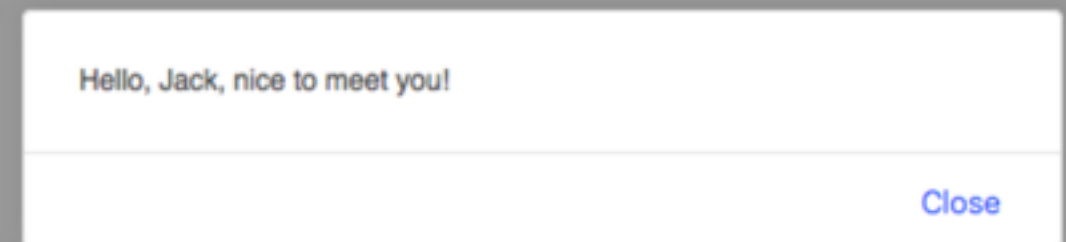

Task01-Saying Hello

Create a program called Task01-SayingHello.html that prompts for your name and prints a greeting using your name.

What is your name?

Cancel OK

Hello, Jack, nice to meet you!

Close

With your partner, write the algorithm in English

Goal 2: You will know how to approach a programming task with others and on your own.

With your partner, write the algorithm in English

1. Prompt the user for his or her name.
2. Display the message.

Goal 2: You will know how to approach a programming task with others and on your own.

Algorithm / Pseudo-code

1. Prompt the user for his or her name.
 - 1a. Remember the user's name.
 - 1b. Construct the message with the user name and save it.
2. Display the message.

Goal 2: You will know how to approach a programming task with others and on your own.

Algorithm

1. Prompt the user for his or her name.
2. Remember the user's name.
3. Construct the message with the user name and save it.
4. Display the message.

With your partner, write a flowchart

Goal 2: You will know how to approach a programming task with others and on your own.

Flowchart

1. Prompt the user for his or her name.

Prompt user

2. Remember the user's name.

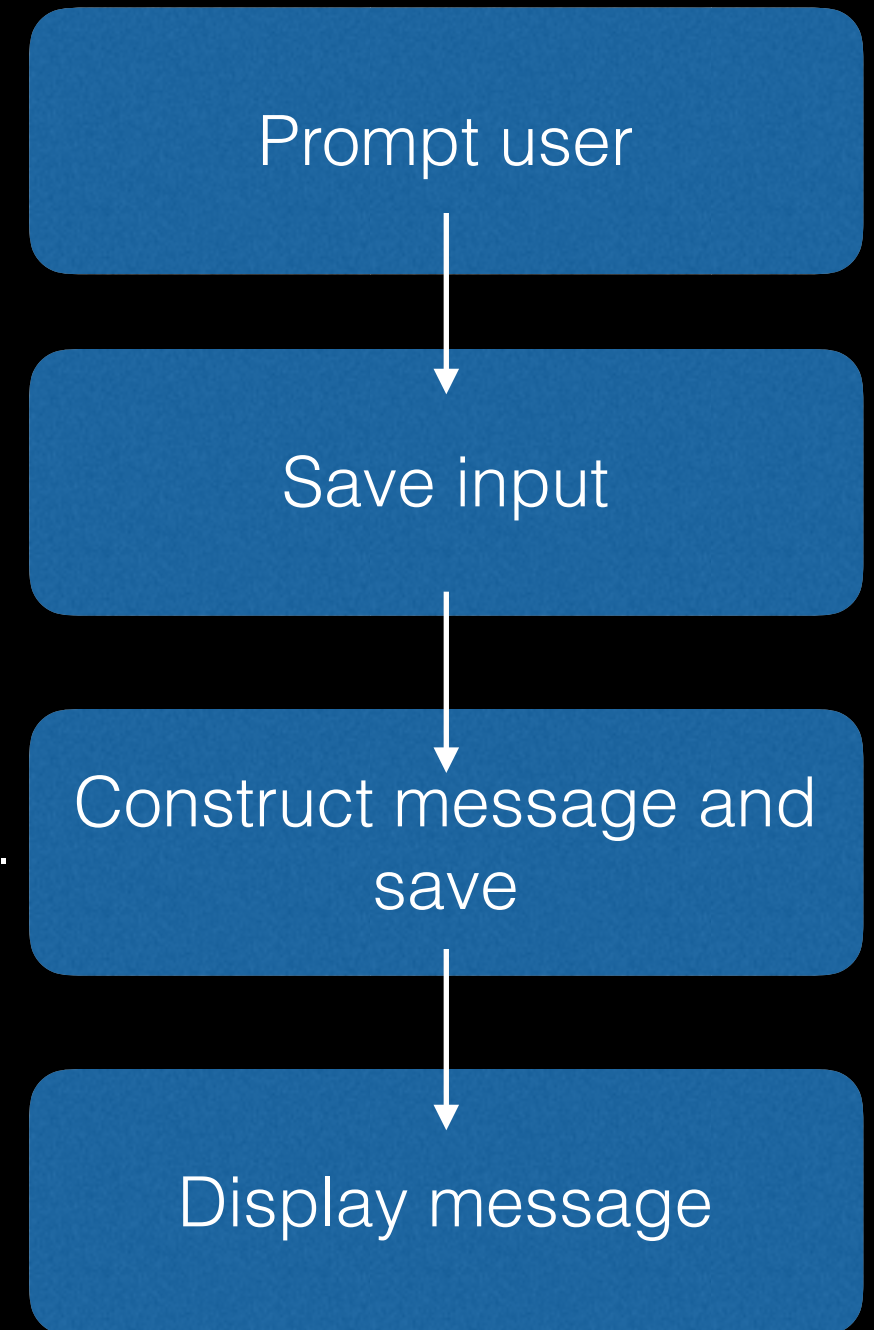

Save input

3. Construct the message with the user name and save it.

Construct message and
save

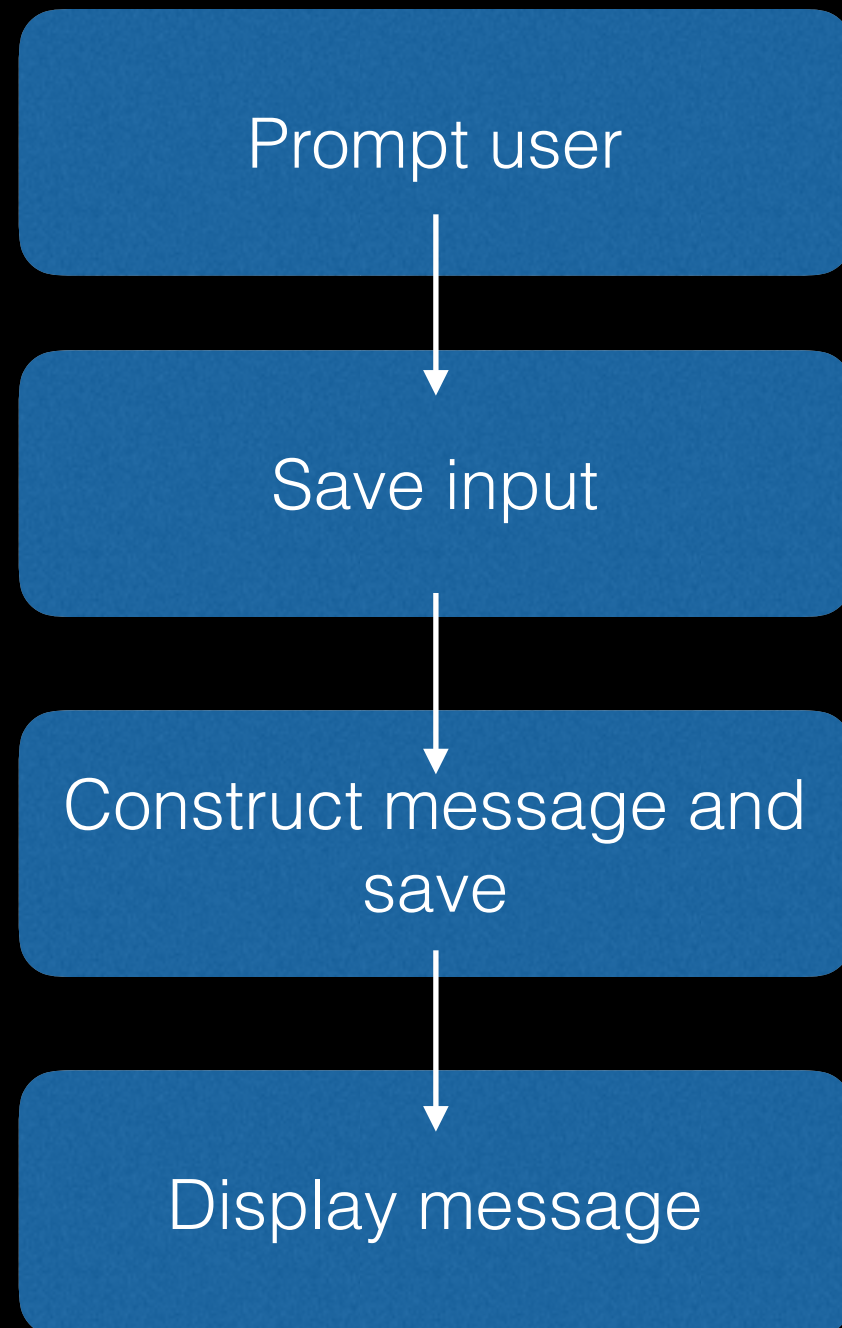

4. Display the message.

Display message

Goal 2: You will know how to approach a programming task with others and on your own.

Flowchart

Goal 2: You will know how to approach a programming task with others and on your own.

Flowchart

Prompt user and save
response

Construct message and
save

Display message

Javascript

```
// Get the user's name and save it in name  
var name = prompt("What is your name?");
```

```
// Construct message with name  
var message = "Hello, " + name + ", nice to meet you."
```

```
// Display message  
alert(message);
```

Goal 2: You will know how to approach a programming task with others and on your own.

Task01-SayHello.html

```
<script>

// Get the user's name and save it in name
var name = prompt("What is your name?");

// Construct message with name
var message = "Hello, " + name + ", nice to meet you.";

// Display message
alert(message);

</script>
```

Goal 2: You will know how to approach a programming task with others and on your own.

Task01-SayHello.html

```
<script>

// Get the user's name and save it in name
var name = prompt("What is your name?");

// Construct message with name
var message = "Hello, " + name + ", nice to meet you.";

// Display message
alert(message);

</script>
```

var message = "Hello, " + name + ", nice to meet you.";

// Display message
alert(message);

</script>
```

Goal 2: You will know how to approach a programming task with others and on your own.

1. Read Task02-CountingNumberOfCharacters
2. Write an algorithm (pseudo-code or flowchart)

Goal 2: You will know how to approach a programming task with others and on your own.

Task02-CountNumberOfCharacters.html

Flowchart

1. Prompt the user for word and save.

2. Calculate length of word and save.

3. Construct the message with the user word and length and save it.

4. Display the message.

Prompt user for word and
save

Calculate length of word
and save

Construct message and
save

Display message

Goal 2: You will know how to approach a programming task with others and on your own.

Other Code

Code

string.length

Example

```
var len = "Hello".length;
```

len will be 5

Escape Characters

Example

\ "

```
alert("Call me \"Bill\", please.");
```

Quotes around Bill will display.

\n

```
alert("Call me Bill.\nNow.");
```

Now will print on a new line.
